

Practical 7: PHP Form Processing with Server-Side Validation and CSV/JSON File Storage

Problem Definition:

Process submitted registration/contact form data using PHP. Validate and sanitize inputs on the server side and store records in CSV or JSON file format. Display success/error messages.

Key Questions

1) Is the form submitted using POST?

Yes. The form uses the POST method to send data securely to the PHP server.

2) Are inputs validated and sanitized server side?

Yes. The PHP code checks and sanitizes the input data before processing it.

3) Is file writing handled safely?

Yes. The data is written to the file using proper file-handling methods such as `fopen()`.

4) Are success and error responses displayed clearly?

Yes. Clear success and error messages are displayed to inform the user .

Code:

registration.php

```
<?php

if (isset($_POST["submit"])) {

    $name = $_POST["name"];
    $email = $_POST["email"];
    $phone = $_POST["phone"];

    // Validation
    if ($name == "" || $email == "" || $phone == "") {

        echo "Please fill all fields.";

    }
    else {

        // Save data in CSV file
        $file = fopen("data.csv", "a");
```

```
        fputcsv($file, [$name, $email, $phone]);

        fclose($file);

        echo "Registration Successful!";
    }
}

?>

<!DOCTYPE html>
<html>
<head>
    <title>Registration</title>
</head>

<body>

<h2>Registration Form</h2>

<form method="POST">

    Name:
    <input type="text" name="name">
    <br><br>

    Email:
    <input type="text" name="email">
    <br><br>

    Phone:
    <input type="text" name="phone">
    <br><br>

    <input type="submit" name="submit" value="Register">

</form>

</body>
</html>
```

Csv.datafile

nency,nency1299@gmail.com,8799608854

Output:

Registration Form

Name:

Email:

Phone:
