

PRACTICAL - 2

Semantic HTML5 pages with Accessibility-ready structure

Problem definition :

Develop static HTML5 skeletons for at least 10 StudentHub pages such as

Home, About, Register, Login, Dashboard, Events, Profile, Contact,

Admin, FAQ, and Feedback. Use semantic tags and accessibility-friendly

Structure.

A) theory:

1. Are semantic tags such as header, nav, main, section, article, aside, and footer used properly?

Answer:

Yes. Semantic HTML tags are used properly to organize the webpage. The <header> contains the page title and navigation, <nav> provides links to other pages, <main> contains the main content, <section> groups related content, <article> is used for independent content where needed, <aside> displays additional information, and <footer> contains copyright and contact details. This makes the code more organized and easier to understand.

2. Are form labels, headings, image alt text, and navigation links accessible?

Answer:

Yes. All form fields have proper labels, headings are arranged in a logical order, images include meaningful alt text, and navigation links are clear and easy to use. These features improve accessibility and make the website easier for all users, including people using screen readers

3. Is the page structure consistent across all pages?

Answer:

Yes. All pages follow the same layout with a common header, navigation bar, main content area, and footer. This gives the website a consistent design and helps users navigate easily between pages.

B) HTML CODE

1) About.html

```
<!DOCTYPE html>

<html>

<head>

  <title>About - Student Hub Portal</title>

D) GitHub repository link

[Studenthub/pages at main · nency1709/Studenthub](https://github.com/nency1709/Studenthub)

E) problem facing :

Maintaining the same layout on all pages was difficult.

I was confused about using semantic HTML tags correctly.

Adding accessibility features like labels and alt text required extra attention.

Linking all pages through the navigation menu took some time.

I fixed the mistakes after testing each page.

F) Learning Outcomes

Students will create clean, linked, and accessibility-ready HTML page Structures.

G) faculty remarks
